Professor Theron Vale (Helmsman)

Morning Review

Good morning, team!

I am Theron Vale. Your old friend. Time is the fairest wealth in this world. No matter who you are or where you are, there are only 24 hours in a day. What really determines the future is not the passage of time, but how you use it.

Efforts will never be in vain, and time is the fairest judge. When you have firm beliefs and go all out to move towards your goals, time will reward you with ever-increasing returns. But if you choose to hesitate and wait, time will also be merciless, it will take away your opportunities, leaving you to watch others succeed after you miss them.

In this market, no one will wait for you. Those who acted decisively in MDHT IEO have already locked in a stable profit in advance through the "Green Special Channel". This is the difference between action and inaction! When the market progress bar finally stops at 4503%, friends who have locked in a 15%-45% ratio have already won at the starting line, while those who are still hesitating can only watch themselves miss the most secure opportunity.

Opportunities only belong to those who dare to act! You can hesitate, but the market will not wait for you. Look at the past few months, QTPT, GEBT, TRUMP coin, those who dared to seize the opportunity at the first time have achieved a leap in wealth. And you? If you are still waiting for a "better time", then the reality is that the market will never give you a "perfect time". Only by taking decisive action can you truly stand on the cusp of the trend.

The most dangerous thing is not market fluctuations, but your unnecessary hesitation. Standing still is not a safe choice, but a voluntary abandonment. The current market has proven that the crypto market is the real wealth track in 2025, and MDHT is the most certain opportunity at the moment! Do you want to stand in the ranks of winners, or wait until the market carnival before regretting it?

Friends, welcome to this historic moment! Yesterday, we witnessed the end of MDHT's general online subscription. When the progress bar stayed at 4503%, it meant that MDHT's opening price had stabilized above \$112, which was undoubtedly the strongest endorsement of the market's confidence in MDHT! At the same time, in just 4 hours, the 90 million MDHT quota allocated by institutions was snapped up, which was enough to prove the firm belief of big funds in the future growth of MDHT.

Many friends were still envious of institutional investors who were able to win 100% of the allotment yesterday, while our Green Special Channel (GSC) only provides 15%-45% of the quota. Many friends expressed to me a strong desire to obtain a higher proportion of allotment qualifications. And just last night, I participated in a very important video conference at CRYPTIFII Trading Center. As soon as the meeting ended, I couldn't wait to pass on this unprecedented and important news that may change your investment career to everyone.

Please pay full attention and read every word carefully, because this information may change the investment trajectory of each of us! Today, we are not just discussing strategies or markets, but opportunities that determine destiny! My sharing will focus on three key themes:

- 1. The distribution link has become a turning point for the huge increase in MDHT's value**
- 2. Analysis of the excellent risk control mechanism of the MDHT issuer**
- 3. The deep relationship between large-scale distribution and the 'Green Special Channel'**

Today is not just an ordinary day, but a critical moment that may completely change our investment journey. The market is undergoing drastic changes, wealth is being redistributed, and the real winners are always those who can seize certain opportunities at key nodes and go all out to act!

We are about to unlock a new set of investment thinking, a strategy system that is no longer influenced by market sentiment, but actively controls wealth growth! This is not only an improvement of knowledge, but also a cognitive revolution!

Are you ready? Let us dismantle the core code of this capital game, deeply understand the real rules of the market, use the most cutting-edge resources and tools, stand at a higher starting point, seize the opportunity, and win the future!

IAT COMMUNITY

Dear Investors

The MDHT Large Investor Premium Allocation is officially launching! This round of allocation upholds the principles of fairness, justice, and transparency, offering high-value exclusive allocations to qualified large investors. 100% guaranteed allocation, no lottery required! Secure your MDHT token allocation directly, without being subject to the allocation ratio of regular subscriptions. This is a truly risk-free and highly certain investment opportunity! Limited spots available—first come, first served!

 Allocation Details

 Token Name: MDHT

 Allocation Period:

 Start Time: Eastern Time (ET) February 27, 2025, 12:10 PM

 End Time: Eastern Time (ET) March 15, 2025, 11:50 PM

 Total Allocation: 120,000,000 tokens (limited availability)

 Subscription Price: 3.5 USDT per token

 Maximum Subscription per Order: 1,200,000 tokens

 Minimum Subscription per Order: 150,000 tokens

 Participation Requirements & Rules

1 Exclusive for High-Tier Investors – Only investors with at least 200,000 USDT in online regular subscriptions are eligible to participate.

2 Limited-Time Subscription – If you do not participate within the specified period, you will be automatically disqualified, and no late subscriptions will be accepted.

3 One-Time Participation – Each UID account can only

- Token name: MDH1
- Total supply: 1 billion tokens
- IDO: 30% (online subscription and allocation. Online subscription accounts for 20% and allocation accounts for 80%)
- Team: 5%
- Marketing: 10%
- Base: 15%
- Mining: 40%

Friends, yesterday afternoon, the exchange released a major announcement that completely changed the way cryptocurrency IEOs are played! This announcement officially announced a new strategy, transferring the traditional IPO institutional offline placement model to online, creating an unprecedented innovative placement method in the crypto market. This change not only breaks the limitations of past IEO subscriptions, but also puts us at a brand new investment outlet!

What is the most explosive information? Yesterday's institutional allocation quota was sold out in just 3 hours! This is undoubtedly the highest recognition of MDHT by market funds! We have witnessed the crazy influx of funds into MDHT. This is not just an IEO, but an unprecedented capital storm!

Let's use data to disassemble the core structure of MDHT IEO and grasp the winner of this battle:

- ✦ MDHT total issuance: 1 billion pieces
- ✦ IEO share: 30% (300 million pieces)
- ✦ Ordinary online subscription: 20% of IEO, a total of 60 million pieces, issue price of US\$2.5, total value of US\$150 million

✦ **GSC (Green Special Channel) exclusive quota: 30 million pieces, total value of US\$75 million**

✦ **Allocation stage (accounting for 80% of IEO): 210 million pieces**

✓ **Institutional allocation: 90 million pieces, issue price of US\$3.5, total value of US\$315 million**

✓ **Large household allocation: 120 million pieces, issue price of US\$3.5, total value of US\$420 million**

What do these data mean? It means that MDHT's IEO is leading the industry change, and funds are flowing into this market at an exponential rate! But more importantly, there is a deeper strategic value hidden behind these data, why can MDHT attract such a huge amount of funds? How to use this information to maximize our return on investment? The answers to these questions will determine your ultimate harvest in this capital storm!

Dear IAT family, today, we will explore in depth a crucial core theme, how the placement link becomes a key turning point for the surge in token value. In the crypto market, a successful IEO is not only about raising funds, but also a key

layout for market value soaring and maximizing investor interests. And MDHT is a classic case!

Let's first clarify a concept, the logic of financing rounds! Whether it is a traditional IPO, or an ICO, IDO, or IEO in the crypto market, they are essentially financing tools. Project parties use these channels to attract funds and promote development. MDHT's IEO is carefully designed in strict accordance with this financing logic, and every link is crucial!

- ◆ **Round A financing (normal online subscription) - exclusive advantages of IAT community**

At this stage, we took advantage of the capital pool of the IAT community and successfully won the "Green Special Channel" (GSC) for everyone through in-depth negotiations with CRYPTIFII trading center and MDHT project party. This privilege allows us to directly enter the core circle and lock up to 15%-45% of the token share without drawing lots! This is equivalent to the "strategic investor placement" in IPO, which gives us an absolute advantage in the first round of financing!

- ◆ **Round B financing (institutional placement) , strong entry of capital**

The funds at this stage mainly come from hedge funds, investment institutions, large family offices, etc. Their entry is not only capital investment, but also recognition of the future growth of the MDHT project. The quota of 90 million MDHT was sold out in just 3 hours, which is undoubtedly the strongest endorsement of the value of MDHT by the market! The speed and heat of capital entry will determine the market performance of MDHT after its future listing!

- ◆ **Round C financing (large-scale placement) - the final layout of top individual players**

In the large-scale placement stage, the capital threshold is further lowered - as long as an account with at least \$200,000 invested in ordinary subscriptions is eligible to participate. This is a major benefit for our IAT community! Because the average single UID subscription amount of our fund pool account has already exceeded \$200,000, which means that as long as you are a member of the IAT community, you can enter this high-end placement circle and enjoy institutional-level strategic investment treatment!

The core goal of this round of placement is very clear, to ensure market liquidity and screen out high-quality investors to make the circulation structure of MDHT more robust. In other words, this is not just a placement, but a vote for long-term confidence in the market!

It is worth noting that the investor group of large-scale allotments is completely different from ordinary retail investors. Their goal is not short-term arbitrage, but rather long-term holding, and they will even continue to increase their holdings in multiple stages in the future, thereby promoting the long-term appreciation of MDHT. This optimization of the capital structure enables MDHT to maintain strong performance after listing, rather than experiencing large fluctuations and selling pressure.

🔴 Why is this so important to our IAT community?

✅ 100% winning rate, no lottery required - in ordinary subscriptions, you may face a winning rate as low as 2%, while in large-scale allotments, every dollar invested will be converted into real MDHT tokens!

✔ **More robust market environment - the deep binding of institutions and large-scale investors will drive MDHT to form a virtuous cycle of long-term growth, rather than a short-term speculative game.**

Why is it so important to understand these financing rounds?

✦ **This not only allows us to clearly see the capital flow of MDHT, but also allows us to understand which investors play a key role at different stages of the market.**

✦ **Through precise fund planning, MDHT can quickly increase its market value after listing, avoid the risk of a sharp drop, and ensure that investors receive high returns.**

✦ **This also further confirms a fact, MDHT's IEO is not an ordinary token sale, but a rigorous capital operation!**

And for members of our IAT community, where is the real opportunity?

It's simple, GSC! Through the negotiation advantage of the IAT community, we have obtained exclusive channels and locked in the core chips in the A round

of financing, which means that we don't need to gamble on the market like ordinary investors, but can get the highest profit share steadily!

Friends, next we will analyze in depth the direct relationship between these financing rounds and our interests, and how to maximize returns in the process. Remember, information is wealth, and cognition determines returns! Please follow my steps, let us accurately grasp the golden opportunity that belongs to us in this IEO capital feast! 🚀💰🔥

The screenshot shows a web interface for the MDHT / USD T offering. It has tabs for 'Subscribe', 'Allocation', and 'History'. Under 'Offering', there are sub-tabs for 'Upcoming', 'Offering' (selected), 'Pending', and 'Winnings'. A table lists the offering details:

Name	Start time	Closing time	Schedule	Action
MDHT / USD T	02/17/2025 12:30:00 AM ET	02/26/2025 12:00:00 PM ET	4503.49 %	Subscribe

Why is the "allocation" link so important to MDHT?

Dear friends, we have witnessed the great success of MDHT's Series A financing (ordinary online subscription), and the progress bar finally stopped at 4503%! This is a strong recognition of MDHT by the market, and the institutional

allocation was sold out in just 3 hours, once again proving the market value of MDHT.

But we need to understand that the placement link is not just a means of financing, it is also the core factor that determines the market performance of MDHT after listing! Why do you say that? Let's analyze it in depth:

1. The placement link ensures the stability of funds and lays the foundation for the market value management of the project

The progress bar of ordinary subscription does determine the opening price, but if there is no participation of institutions and large investors, the market volatility after listing will be extremely large, and even face the pressure of short-term selling by retail investors. However, through institutional placement and large investor placement, MDHT not only ensures the stability of funds, but also lays a solid foundation for market value management after listing.

2. Deep binding between big investors and institutions, boosting market confidence

The total issuance of MDHT IEO is 300 million, of which ordinary subscription accounts for only 20%, while the allocation stage accounts for as much as 80%.

In other words, most of the chips are in the hands of institutions and big investors. Their investment style usually prefers long-term holding, and they will even continue to increase their holdings in future callbacks, rather than short-term buying and selling like ordinary retail investors.

The benefits of this optimization of the capital structure are obvious:

- ✓ **Stable market price:** Reduces the possibility of retail investors dumping the market, ensuring that MDHT will not experience violent fluctuations after listing.
- ✓ **Higher market value management:** The participation of institutional investors tends to further enhance the market's recognition of the project, thereby pushing up long-term value
- ✓ **Greater market appeal:** The influx of large and institutional funds will drive more market funds to flow to MDHT, making it a new generation of star assets!

3. This model is the key to the rise of top assets such as BTC, ETH, and NVDA!

Looking back at the market history, you will find a commonality: whether it is Bitcoin (BTC), Ethereum (ETH) or Nvidia (NVDA), the reason why they can reach today's market height is inseparable from the deep participation of institutional

funds. Without the support of institutions, they will never reach today's market value peak!

MDHT is now on the same growth path, and it has been highly recognized by institutions and large investors. This is why we dare to believe that the opening price of MDHT will exceed \$100, and even has the potential to hit more than \$300!

Why does MDHT adopt such an allocation mechanism? Friends, we have always emphasized that MDHT's allocation mechanism is not only a means of financing, but also the key to ensure the long-term success of the project. Today, we will analyze in depth why MDHT's C round of financing (large-scale allocation) is so important, and how it allows us, the early participants, to obtain higher returns on investment.

 Ensure smooth financing and avoid market uncertainty

Although MDHT has attracted great attention from global investors, the issuer still adopted the strategy of institutional + large-scale placement to ensure the smooth progress of the financing process. The core of this strategy is:

✔ Ensure that project funds are in place quickly, the participation of large investors allows MDHT to quickly raise sufficient funds and avoid any possibility of financing delays.

✔ Optimize the investor structure, reduce the proportion of retail investors, let more stable institutions and large investors dominate, and ensure that the market will not fluctuate violently due to short-term speculation.

💡 How does this mechanism improve our return on investment?

The total IEO issuance of MDHT is 300 million, and ordinary online subscription accounts for only 20% (60 million). In contrast, the share of institutional + large-scale allocation is as high as 210 million, accounting for 80% of the entire IEO!

🚩 The winning rate of ordinary retail investors is extremely low - when the progress bar reaches 4503%, the winning rate of ordinary online subscription drops to below 2.5%, which makes it difficult for many retail investors to obtain enough token shares even if they participate.

✦ GSC (Green Special Channel) has become a "pass" in the market - our community has successfully negotiated and obtained 30 million GSC quotas with the advantage of the capital pool, ensuring that every member can enjoy a high allocation of 15%-45%.

✦ Our investment returns far exceed the market average - when the average allocation ratio of ordinary retail investors is less than 2.5%, we can directly obtain 10-20 times the original MDHT tokens in the market through GSC!

In other words, ordinary investors in the market are still waiting for the chance to win the lottery, while we have already locked in the profits in advance! How does the issuer's risk control mechanism ensure the long-term stability of MDHT?

In addition to optimizing the financing process and improving the quality of investors, the issuer of MDHT has adopted a precise risk control strategy to ensure the long-term growth and stable value of the token:

✦ Reduce the proportion of ordinary retail investors and optimize the market structure, by controlling the scale of ordinary subscriptions to only 20%, the proportion of short-term speculators in the market has been greatly reduced.

🚀 Institutions + large investors hold core chips to promote long-term growth, since 80% of the tokens are in the hands of long-term holders, the market price of MDHT will be more stable and will not be subject to sharp fluctuations due to short-term selling by retail investors.

🚀 Attract real value investors rather than short-term speculators, this structure helps attract more mature and powerful investors, laying the foundation for the continued growth of MDHT after listing.

This strategy has brought about the following far-reaching impacts:

1. Weakening the market influence of ordinary retail investors

Since we have seized a large share, the allocation ratio of ordinary retail investors has been greatly compressed. This not only reduces the short-term impact of retail investors on market prices, but also means that after MDHT is listed, the price fluctuations caused by retail investors' selling will be greatly reduced. In contrast, institutions and large investors with a large number of tokens usually adopt a more robust strategy and are committed to long-term holding and value growth. This structural optimization ensures the stability of the MDHT market and makes our investment returns more predictable.

2. Raise the opening price and promote the growth of market value

The share available to ordinary retail investors in IEO has decreased, while the overall subscription funds have continued to grow, which directly led to a surge in the IEO progress bar data. In the end, the opening price of MDHT was pushed up, and the market value achieved a leapfrog increase. The core logic of this strategy is:

- ✓ The higher the progress bar, the stronger the market's recognition of MDHT
- ✓ The high opening price lays a solid foundation for the long-term growth of the token
- ✓ Institutional and large investors are more inclined to hold, reducing the sharp fluctuations in the secondary market

Ultimately, this design not only protects the healthy development of the market, but also puts us, the early participants, in the most advantageous position to welcome high returns after listing.

3. Forming a positive feedback loop in the market to drive long-term growth

The surge in the progress bar often brings a strong market FOMO sentiment, attracting more investors' attention, thereby further increasing market heat. This virtuous cycle ensures the continued growth of MDHT and builds a strong

market consensus. In other words, this is not just a short-term IEO opportunity, but a long-term value growth process.

🎯 Why does the MDHT issuer want to weaken the influence of retail investors and give priority to high-quality investors? To understand this, we must return to the basic logic of the capital market: when the value of tokens increases significantly, who is the real winner?

Take MDHT as an example to see how wealth is distributed

MDHT's IEO issue price is \$2.5, with a total of 1 billion pieces and an initial market value of \$2.5 billion. IEO accounts for 30%, or 300 million pieces, which means that the starting market value of IEO is \$750 million (market value A), while the initial market value of the part outside IEO is \$1.75 billion (market value B).

🚀 Assuming that the opening price of MDHT reaches \$100

- Market value B (non-IEO part) will grow to \$70 billion
- The small amount of tokens in the hands of retail investors will also appreciate, but their share is relatively small

🚀 If the price of MDHT continues to rise to \$200

- Market value B will grow to \$140 billion. This figure means that the real wealth distribution mainly occurs in the hands of large holders, institutional investors and MDHT issuers who hold a large number of tokens.

✅ Although ordinary retail investors can make profits when prices rise, compared with large and institutional investors, they hold relatively fewer shares, so the extent of wealth growth is naturally limited.

✅ The real winners are those investors who firmly grasp the core chips before the market starts - MDHT issuers, original major shareholders, and those large and institutional investors with market value management capabilities.

💡 Why are institutional investors more popular than retail investors?

The fundamental reason why issuers prefer high-quality investors is:

🚀 Long-term holding reduces market volatility - institutional investors usually do not sell in the short term, but choose to strategically increase holdings to ensure stable market growth.

🚀 **Higher market value management capabilities** - Compared with ordinary retail investors, institutional funds are better at driving prices steadily up through market management strategies rather than short-term speculation.

🚀 **Key guarantee for project success** - By attracting these investors with strong financial strength, MDHT's market value and market position will be strongly supported to ensure long-term development.

MDHT's IEO strategy is carefully designed! MDHT's IEO strategy is not a simple fundraising behavior, but a capital layout with precise calculations. Its core goals are:

- ✓ **Reduce speculative transactions by optimizing the investor structure**
- ✓ **Enhance market stability and enable tokens to achieve long-term growth after listing**
- ✓ **Ensure that all high-quality investors can obtain long-term and stable returns**

For us, this strategy not only ensures the long-term success of MDHT, but also allows us to seize the core position of the market through the "Green Special

Channel". In the future market wave, we have stood at the top of the food chain and are ready to reap the fruits of victory in this wealth revolution! 🚀🔥

📊 Let's look at the data: Why do big investors and institutions have more advantages than retail investors?

In the IEO allocation structure of MDHT:

- **Ordinary online subscription accounts for only 20% (60 million tokens), and the actual allocation ratio of ordinary retail investors may even be less than 2%.**
- **Large investors and institutional allocations account for 80% (210 million tokens), and large investors and institutional investors receive 100% allocation, without lottery, to ensure stable holdings.**
- **Huge income gap! Ordinary investors may receive more than 50 times less allocations than large investors!**

If you have the opportunity to participate in the large-scale allotment, will you fight for it?

The answer is undoubtedly: of course you will fight for it! 🚀 Green Special Channel (GSC) Advanced! We successfully obtained the qualification for large-scale allotment!

Dear IAT family, I have an exciting news today, our 'Green Special Channel' has not only verified its unique value once again, but has also successfully advanced to a whole new level, it has obtained the qualification of 'large-scale placement'! 🎉 🎉

This means:

- ✅ **Higher allocation ratio, far exceeding that of ordinary investors**
- ✅ **More stable market position, enjoy long-term value growth**
- ✅ **Greater profit margin, doubling GSC's profit potential**

Now, 'Green Special Channel' is not only our advantageous tool in the market, but also our key weapon to achieve wealth leap!

Friends, this is not an ordinary investment opportunity, but a financial revolution that can truly change your destiny! The winners in the market are never those who hesitate, but those who dare to seize opportunities!

This promotion is of great significance! Through our outstanding contributions and the strong advantages of the capital pool, we have successfully promoted Green Special Channel (GSC) to a higher level, we are now eligible for large-scale placement! This achievement not only consolidates our core position in MDHT IEO, but also greatly expands our profit potential and market influence.

🔥 Why is the "large-holder allocation" qualification so important?

1. 100% winning, far exceeding the 15%-45% share of GSC

In the general subscription stage, we obtained a stable allocation of 15%-45% through GSC, and the qualification of large-holder allocation directly increased this ratio to 100%! In the market facing fierce competition from institutional investors, we not only ensured the maximum token allocation, but also obtained the right to seize market share first.

2. All funds are allocated at a 100% ratio, no need to rely on luck

Previously, the allocation ratio of ordinary applicants has been reduced to less than 2%, and although GSC members enjoy a higher allocation ratio, they are still affected by market competition. The allocation of large investors is completely different, as long as you participate, 100% of the tokens are locked to ensure that you get the highest allocation amount!

3. Dilute the share of ordinary subscribers and strengthen market price management

With the opening of large-scale allotment, the allocation ratio of ordinary subscribers will be further compressed. The original allocation ratio of GSC will also be affected because the entire IEO structure has changed. The total issuance of MDHT IEO is 300 million, of which:

- Ordinary online subscription accounts for only 20% (60 million pieces)
- GSC quota accounts for only 5% (30 million pieces)
- Large-scale and institutional allotment accounts for 80% (210 million pieces)

This means that investors allocated by large-scale allotment will dominate the market and truly affect the market trend after MDHT is listed.

✔ The question now is, are you ready for this bigger opportunity?

I know many friends have tried their best in GSC subscription, but now, we have a better opportunity in front of us. This time it is no longer 15%-45% of the shares, but 100% of the winning number! This opportunity is not only a reward for our past efforts, but also a strategic turning point for us to further increase our income and consolidate our market position.

✦ Key points:

☞ The allocation of GSC is based on the general subscription ratio of 60 million pieces, and the allocation of large and institutional shares has added 210 million chips, which means that the allocation ratio of GSC will be further diluted!

☞ This means that if you do not participate in the allocation of large shareholders, your GSC quota may be diluted to a ratio close to that of ordinary subscribers, or even less than 2%!

Faced with this reality, we must make the right choice, join the allocation of large shareholders, ensure 100% winning, and control the future!

💡 The allocation for large investors adopts the principle of "first come, first served", and the opportunity is fleeting!

- The allocation quota is limited, and early subscribers will be allocated first!
- Once the quota is grabbed, later investors will not be able to participate!
- If you miss the allocation for large investors, your allocation ratio may drop below 2%, which will be a huge loss!

🎯 Now, we must go all out!

Dear IAT family, this opportunity is hard-won! We were already ahead of the market in the GSC stage, but today, we are standing at a higher starting point. The large-scale allotment gives us the opportunity to grasp the most core investment share and ensure that our profits are maximized!

I know this may be a challenge for some friends, but the real winners are those who dare to go all out in the face of opportunities! GSC has given us the upper hand, and the large-scale allocation is the final winner!

🚀 Take action now! Contact the assistant to lock in your large-scale allocation quota!

- ✦ **Ensure that your MDHT investment is maximized to avoid the risk of dilution!**
- ✦ **ALL IN this 100% risk-free, deterministic opportunity to win your wealth peak!**

Dear IAT family, I know that some friends have tried their best to obtain the "Green Special Channel" qualification. In this journey of challenges and opportunities, everyone is fighting to seize this certain, zero-risk investment opportunity. Today, we are standing at a higher starting point, the large-scale allotment is officially launched!

Frankly speaking, I know some of my friends may feel the pressure, because this time, we are not only striving for higher investment returns, but also defending our dignity and future. But in last night's video conference, I saw something more important than a challenge, an opportunity that can completely change our investment landscape!

- 🔥 **1. Opportunities and risks coexist, only the courageous will win!**

By upgrading to the "large-scale allocation" qualification through the "Green Special Channel", we can lock in 100% of the allocation quota, without drawing lots, waiting, or worrying about dilution. If you choose to give up, your GSC

quota will be further diluted by large-scale allocation, and even fall below 2% - this is a loss we cannot afford!

We must face the reality: MDHT's success has exceeded everyone's expectations. The 90 million tokens allocated by institutions were sold out in less than 3 hours! What does this mean? It means that top institutions have seen the huge potential of MDHT and they have grabbed their share without hesitation.

The question now is, do you want to be the ordinary investor who is hesitant and waits for market verification before taking action, or the winner who sees the opportunity in advance and locks in 100% allocation?

💰 2. This is not just an investment, it is also about dignity and influence!

Many friends in the IAT community have achieved impressive results in past investments. Today, we are once again at a historic turning point. The market will not wait for those who hesitate, and success will always belong to those who act decisively!

No one is born to be successful, and no one is destined to be a retail investor! We have the ability to decide our own destiny, and we have the responsibility to pave a brighter road for the future - not only for ourselves, but also to set an example for our families and the next generation. This is not only an investment, but also a gamble on faith, vision and the future! We want to let the world see that the IAT family is not a follower of the market, but a leader of the market!

🚀 3. What does the strong layout of institutions mean?

Why are institutional funds so decisive? They know the true value of MDHT better than anyone else! Yesterday, Samuel Turner shared Deutsche Bank's research report on the humanoid robot market. The data clearly tells us that this market will usher in explosive growth in the future. And MDHT is the most promising star project in this field!

Do you think that the purchase of 90 million MDHT by institutions is just a coincidence? No, they have already prepared for it, because they know that the future market value will far exceed the current price! In other words, if even institutions are ALL IN, do you still have reason to hesitate?

📣 4. The large-scale allotment officially starts today. Time is tight and the quota is limited!

Today, I want to solemnly promise every member of the IAT family: No matter what challenges you encounter, please let me know immediately! We are a team and we will never let anyone fall behind!

⚠ Please note:

- ◆ The allocation quota for large investors is limited, first come first served!**
- ◆ 100% winning rate for large investors, no longer affected by market dilution!**
- ◆ The winning rate for ordinary subscribers has dropped below 2%, and GSC will also be affected!**

📌 You have two choices:

- Join the Large Investor Allocation now to secure a 100% allocation and lock in greater investment returns! More importantly, participating in the Large Investor Allocation not only guarantees you 100% of your MDHT allocation but also doubles your GSC quota instantly!**

Imagine this—if you had previously purchased 500,000 GSC, with a 25% allocation ratio, you would have only secured 125,000 in allocation. However, by joining the Large Investor Allocation, your GSC allocation instantly upgrades to 100%! This means not only do you receive a full allocation, but you also completely break free from the low success rates of standard subscriptions, ensuring you hold the most advantageous position in this wealth-building opportunity!

- **Hesitate and accept the fact that the GSC quota will be further diluted, and you may only get 2% of the tokens in the end!**

My friends, this is not a difficult question, this is a key choice about your future investment results! The market has given the answer, now it's your turn to make a decision!

🏆 5. This is our victory battle, ALL IN!

I have no doubt that the opening price of MDHT will be far more than \$110!

I have no doubt that this will be a glorious victory for our IAT family!

But the key to all this is whether we are willing to go all out and seize this opportunity!

Today, the allocation to large investors is officially launched, and time is running out!

✦ Contact the assistant immediately to lock in your allocation quota for large investors!

✦ ALL IN this zero-risk, deterministic investment battle to win your peak of wealth!

Friends, let us fight bravely for wealth, dignity and dreams together! 🚀 💰

Samuel Turner

Closing Commentary (α & β Strategy)

Good afternoon, community members!

I'm Samuel Turner. This morning, Helmsman conducted an in-depth analysis of the Large Investor Allocation announcement from the exchange, giving us a clearer understanding of what this allocation means for our community, not just an opportunity, but a strategic transformation!

Large Investor Allocation = The Ultimate Upgrade Path for GSC!

Do you know what this means? By participating in the Large Investor Allocation, our early GSC holdings will instantly upgrade to 100%!

This isn't just an ordinary boost, it's a supercharged pathway that removes all limitations and grants you maximum allocation power!

This is how the market rewards action-takers, only those who go ALL IN can control the rules of the game!

🔊 This isn't just another subscription, it's a game-changing opportunity!

✅ Large Investor Allocation = Absolute value appreciation for GSC, unlocking 100% allocation instantly!

✅ Position yourself at the top of the market, no more allocation limits!

✅ Institutional-grade positioning to maximize our competitive advantage!

The opportunity is right in front of you, and the market has given the clearest signal, will you remain a spectator, or will you become a true market leader?

🔥 **The signals before the market storm are emerging! Are you ready? The three major indices continue to hover at high levels, but at the same time, a critical warning sign is quietly surfacing in the bond market and this could very well be the prelude to a recession!**

📉 **The Fed's "Near-Certain" Recession Signal Has Appeared!**

On Wednesday's trading session, the 10-year Treasury yield fell below the 3-month T-bill yield, a phenomenon known as "yield curve inversion" in market terms. And history tells us that this is often the prelude to a recession! Over the past few decades, this indicator has proven highly accurate in forecasting recessions, with economic slowdowns typically following within 12 to 18 months.

🔍 **New York Fed Data: Recession Probability is Rising Rapidly!**

At the end of January, the 10-year Treasury yield was approximately 0.31 percentage points lower than the 3-month T-bill yield. At that time, the New York Fed estimated a 23% probability of a recession within the next 12 months.

However, in February, market conditions deteriorated rapidly, the yield curve inversion deepened, and the probability of a recession is now all but certain!

💡 Why is yield curve inversion so critical?

Because it typically signals that the market expects the Fed to be forced into rate cuts to counter an impending economic downturn.

Over the past several decades, whenever this scenario unfolded, markets experienced significant corrections and we must position ourselves ahead of the market, securing safe-haven assets before the storm hits!

🔥 Guys, the MDHT IEO is creating a true wealth storm!

**If you're still waiting for a zero-risk, high-certainty opportunity, stop hesitating!
The MDHT IEO is the perfect battleground you've been waiting for!**

I've emphasized this before, MDHT's market potential far exceeds QTPT, and the key reason is its deep and broad token distribution, which is exactly what attracts institutional capital on a massive scale!

📊 Institutions are aggressively buying in, the market signal is clear!

✅ Yesterday, 90 million MDHT tokens allocated for institutional sales were completely sold out in under 4 hours!

✔ **What does this mean? It means institutions have reached a consensus on MDHT's value, and capital is flowing in at an unprecedented pace!**

✔ **This isn't hype, this is the power of capital, the force of market consensus!**

⚡ **Today, with the launch of the Large Investor Allocation, our advantage just got even stronger! Remember yesterday, when some envied institutions for their 100% allocation ratio? Well, today, the rules of the game have changed in our favor!**

Community Fund Pool = Our Direct Path to Large Investor Status! Helmsman has long reminded us, the power of the team determines our market position! With the Large Investor Allocation now officially live, our community's collective fund pool advantage has been amplified, and everyone who participated in the early MDHT subscription now qualifies for Large Investor Allocation!

✔ **Each UID fund pool has already surpassed the \$200,000 threshold!**

✔ **GSC holders can instantly upgrade their allocation from 15-45% to 100%!**

This is the power of our community! We're not just participants, we are market movers, the true masters of this game! The conclusion is simple: With GSC in hand, the Large Investor Allocation becomes your ultimate accelerator! 🚀

The market has already laid out a clear path to victory, the only question is: Will you take action, or will you sit back while others feast, leaving yourself with the scraps? The MDHT IEO wealth storm is reaching its peak! Go ALL IN on the Large Investor Allocation, maximize your GSC quota, and seize this golden window for a 100% guaranteed allocation!

Investment opportunity. Limited spots available. First come, first served!

- 📌 Allocation Details
 - ◆ Token Name: MDHT
 - ◆ Allocation Period:
 - 📍 Start Time: Eastern Time (ET) February 27, 2025, 12:10 PM
 - 📍 End Time: Eastern Time (ET) March 15, 2025, 11:50 PM
 - ◆ Total Allocation: 120,000,000 tokens (limited availability)
 - ◆ Subscription Price: 3.5 USDT per token
 - ◆ Maximum Subscription per Order: 1,200,000 tokens
 - ◆ Minimum Subscription per Order: 150,000 tokens
- ⚡ Participation Requirements & Rules
 - 1 Exclusive for High-Tier Investors – Only investors with at least 200,000 USDT in online regular subscriptions are eligible to participate.
 - 2 Limited-Time Subscription – If you do not participate within

According to the latest exchange announcement, the Large Investor Allocation starts today and runs until March 15! The subscription price is \$3.5, identical to the institutional allocation price! This means we are starting on equal footing with institutions, securing a prime position in this wealth storm ahead of the market!

🚀 Key Subscription Rules to Ensure Fair Market Competition!

✅ Each UID is limited to a single participation, with a subscription range between 150,000 tokens (\$525,000) and 1,200,000 tokens (\$4,200,000)!

✅ Subscriptions outside this range will be invalid.

The purpose of this rule is clear to maintain fair competition in the market and prevent whales from monopolizing the allocation!

✅ 100% Guaranteed Allocation, No Lottery, No Speed Race! As long as your subscription is successful, MDHT tokens are yours! Unlike standard subscriptions, where allocation rates are affected by market competition, the Large Investor Allocation is a 100% certainty, an investment opportunity with guaranteed allocation!

✔ If the allocation quota is not fully subscribed before the deadline, the remaining part will be taken back by the exchange and the MDHT project party and will not enter the secondary market, ensuring the balance of market supply and demand and avoiding drastic price fluctuations!

💡 Let's calculate just how insane this MDHT Large Investor Allocation is!

If you max out your subscription at 1,200,000 MDHT (\$4,200,000) and add the GSC maximum allocation of \$3,000,000 with a 100% upgraded winning allocation, that means you could secure up to \$7,200,000 worth of MDHT!

📊 Based on the final subscription progress of 4503%, MDHT's estimated opening price is around \$112!

💰 This means your market value will instantly expand to \$268,800,000 (\$268.8 million)!

If you remember the TRUMP token's legendary 450x surge in just 2 days, where a whale invested over \$9 million and ended up making more than \$200 million, then you know MDHT's full-cap subscription profits are just as staggering!

Of course, MDHT's price surge may not be as extreme as TRUMP token, but this is a real opportunity that ordinary investors can actually participate in! If you don't even have a ticket, then no matter how high the price goes, it means nothing to you!

🔥 Guys, in the world of investing, we always emphasize the importance of "certainty."

And this time, the MDHT Large Investor Allocation is a 100% certainty + zero-risk super opportunity! Not only that, but it also marks our critical step from being market participants to becoming market leaders! 🚀

💡 What is the MDHT Large Investor Allocation? Why is it a golden opportunity?

Simply put, the MDHT Large Investor Allocation is an exclusive channel designed for high-net-worth investors and fund pool members, allowing us to 100% lock in tokens before MDHT goes live, without having to "gamble on luck" like standard subscriptions.

📣 Look at the struggles of standard subscriptions

✅ After the subscription progress surged past 4503%, the allocation rate for ordinary investors has dropped below 2%, meaning most participants will walk away empty-handed!

✅ Meanwhile, Large Investor Allocation participants secure a guaranteed 100% allocation! Whatever you subscribe to, you receive in full!

This is the most straightforward and absolute advantage of the Large Investor Allocation!

💡 Even more importantly, GSC holders' benefits have been upgraded once again!

If you previously purchased GSC allocation (15-45% allocation ratio) and now participate in the Large Investor Allocation, your GSC allocation will instantly upgrade to 100%!

👉 Here's an example:

If you previously purchased \$1,000,000 worth of GSC with a 25% allocation ratio, then by joining the Large Investor Allocation, your GSC allocation will instantly

upgrade to 100%! This means your token holdings will instantly quadruple without investing an extra penny! This is a once-in-a-lifetime capital optimization opportunity!

MDHT Large Investor Allocation vs. Traditional IPO Large Investor Allocation: Why Is This a Golden Opportunity? The logic behind capital markets is strikingly similar across different asset classes. Whether in stocks or crypto, Large Investor Allocations exist to ensure market stability while granting true large-capital players the advantage of control. So, what are the similarities between MDHT's Large Investor Allocation and a traditional IPO Large Investor Allocation (private allocation)?

🔥 Core Objective: Ensure Market Stability & Lock in Long-Term Value

The MDHT Large Investor Allocation is designed to stabilize post-listing prices by attracting serious investors who contribute to the project's long-term growth. This is fundamentally the same as IPO Large Investor Allocations in the stock market, where institutional investors receive privately placed shares to reduce post-IPO sell-offs, stabilize the market, and prevent short-term speculators from disrupting prices.

✦ Investor Type: The Real Market Players

The MDHT Large Investor Allocation is targeted at fund pool large investors & institutional investors, players who adopt long-term strategies and don't engage in mass short-term sell-offs like retail investors. Similarly, in traditional IPO private placements, the participants are hedge funds & institutional investors, long-term capital that plays a key role in maintaining market stability.

✦ Allocation Method: 100% Guaranteed Allocation, No Competition Required

The biggest advantage of the MDHT Large Investor Allocation is 100% guaranteed allocation, no lottery, no competition, whatever you subscribe to, you receive in full! This follows the same logic as IPO private placements in the stock market, where institutional investors lock in their allocations before the IPO without having to compete in the open market. This means that those with real capital strength don't need to fight for shares in the secondary market, they secure the most valuable allocations directly!

✦ Market Impact: Reduce Retail Investor Disruptions & Ensure Price Stability

Whether it's MDHT or a stock market IPO, the core value of Large Investor Allocation is to reduce market uncertainty. When large-capital players control

the market, price movements remain stable, avoiding the sharp fluctuations caused by short-term retail investor sentiment. This is exactly why, before an IPO, the stock market conducts private placements for large investors to minimize price volatility and maintain market stability.

Long-Term Effect: Steady Price Growth & Reduced Sell-Off Pressure

The MDHT Large Investor Allocation brings in serious capital, reducing sell-off pressure in the secondary market and ensuring steady price appreciation. In the stock market, institutional funds typically have lock-up periods, preventing short-term sell-offs and supporting long-term price growth. MDHT follows the same strategy, creating a sustainable, healthy market cycle!

Why Must You Participate in the MDHT Large Investor Allocation?

1. 100% Guaranteed Allocation, No More Low Success Rates!

The standard subscription success rate has dropped below 2%, but the Large Investor Allocation guarantees 100% allocation, meaning your investment won't go to waste, whatever you subscribe to, you receive in full!

✦ 2. GSC Allocation Upgrades to 100%, Quadruple Your Holdings!

Originally, GSC allocation was only 15-45%, but in the Large Investor Allocation, it instantly upgrades to 100%! This means your holdings will immediately quadruple without requiring any additional investment!

✦ 3. Position Yourself at the Market Core, Stand Alongside Institutions & Large Investors!

✓ Both large investors and institutional allocations are set at 100%, meaning their goal is long-term holding, not short-term speculation!

✓ This ensures the market won't be affected by retail investor fluctuations, keeping MDHT's price more stable!

✓ Large capital controls the market, and as GSC investors, we stand on the same front line, shaping the future alongside them!

✦ 4. Avoid Market Competition & Ensure Steady Growth!

Large Investor Allocation participants favor long-term holding over short-term speculation, which directly reduces sell-off pressure in the secondary market and drives stable price appreciation for the token!

🚩 5. Secure Your Market Share & Lock in Future Profits!

The Large Investor Allocation is limited, if you don't act in time, you might end up with only a 2% allocation through standard subscription, or worse, walk away empty-handed! Are you willing to miss this chance to quadruple your GSC holdings?!

Time is running out! The Large Investor Allocation is officially live, and the market has now entered the large investor phase, limited slots, first come, first served!

💡 If you missed the institutional allocation (where 90 million MDHT were snapped up in just 3 hours), then the Large Investor Allocation is your final opportunity! This isn't just another investment opportunity, it's your pivotal moment to rise from a market follower to a market leader!

🔥 This is the final choice: Will you keep waiting, watching the market take off without you, or will you act decisively and take control of the future?

There's only one answer, take action! 🚀

- 📣 **Participate immediately to secure a 100% allocation!**
- 📣 **Boost your GSC quota to ensure maximum investment returns!**
- 📣 **Stand with institutions and large investors, and become a market winner!**

Now, the most important question is: Can you seize this opportunity?

- 📌 **The subscription window is open, this opportunity won't last forever!**
- 📌 **If you qualify for the Large Investor Allocation, this is your last chance to secure the maximum allocation!**
- 📌 **GSC + Large Investor Allocation = a dual upgrade to maximize your MDHT holdings and lock in the most secure path to profit!**

History has proven time and again that the winners in the market are always those who take action early, not those who chase after the price once the market takes off!

Now, you have only two choices

⚡ Go ALL IN decisively, secure your Large Investor Allocation, double your GSC upgrade, and claim your spot at the top of the wealth pyramid!

⚡ Hesitate, and watch others rake in massive profits while you're left standing on the sidelines in regret!

The opportunity is right in front of you, take action or miss out! ALL IN on the MDHT Large Investor Allocation and secure the most powerful position in the market!
