9:30 AM

Professor Theron Vale (Helmsman)

Morning Review

I'm Theron Vale, your old friend. A new day brings a morning full of hope. Every day, I reflect on how to make life more meaningful. Over the past few days, I've had deep conversations with many friends from the IAT community, discussing our shared American Dream. What fills me with gratitude is seeing so many friends from all over the world in our community, people who, through courage and determination, have found their place in this great nation, building careers, families, and a future. And today, I want to share some thoughts on the American Dream with you.

What is the American Dream? It is not just a slogan but a belief, a firm conviction that through hard work, courage, and determination, one can change their destiny and create a better life. No matter where you come from or what you've been through in the past, everyone starts on the same playing field. As long as

you have ambition, you can strive for it, and you have a chance to succeed. This is what makes America truly great, it provides everyone with an equal opportunity to compete.

In the IAT community, we come from different backgrounds, each with our own stories and experiences. But we share a common goal, to achieve financial freedom through investment and wisdom, creating a better future for ourselves and our families. This is the truest embodiment of the American Dream, everyone has the ability to change the course of their life and take control of their destiny through hard work and the right decisions.

But remember, moving forward with courage is the only path to realizing our dreams. The market always fluctuates, and the journey of investing is full of challenges and uncertainties, but true success is never easy. As the Bible says, "One thing I do: forgetting what is behind and straining toward what is ahead, I press on toward the goal." The road to success is always filled with obstacles, but those who persevere will eventually reach their moment of triumph. We must not doubt ourselves because of temporary setbacks, nor hesitate when opportunities arise. History has shown us time and again that all great achievements are made by those who dare to take action.

Do you still remember that profound statement from the Declaration of Independence? "We hold these truths to be self-evident, that all men are created equal." This is one of the core beliefs upon which America was founded, emphasizing that everyone should have equal rights and opportunities. Yes, the real world is not perfect, inequality and barriers still exist, but that doesn't mean we have to accept an unfair fate! On the contrary, it should inspire us to break through limitations and create our own success! Opportunities are not something we wait for, they are something we fight for!

Now, as the countdown to MDHT's listing reaches its final stage, we stand at the threshold of making our dreams a reality. The large-scale allocation is our last opportunity, our golden ticket to truly changing our destiny. The market waits for no one, and success does not favor those who hesitate. Only those who act decisively and give it their all can seize the gears of fate and completely transform their lives!

Dear friends, the opportunity is right in front of us! Let's stand together, move forward with courage, and achieve our own American dream within the IAT community. Believe that your efforts will not go in vain, and your determination will eventually bring rewards. The future belongs to those who dare to chase!

Back to the market, this morning, the February CPI was just released, showing a year-over-year increase of 2.8% and a month-over-month rise of 0.2%, both lower than previous readings and market expectations. This data immediately shifted market sentiment, triggering a strong rebound in tech stocks, particularly in AI-driven stocks led by NVIDIA (NVDA), which saw a sharp pre-market surge. The mood quickly turned from caution to optimism. After a technical oversell, today's market is poised for a potential rebound. However, given the prevailing bearish trend, such rallies are more likely to be met with selling pressure at higher levels.

The weaker-than-expected CPI has also provided a boost to Bitcoin and the broader crypto market by enhancing liquidity conditions. As rate-cut expectations gain momentum, increased dollar liquidity could drive institutional capital inflows into crypto at a faster pace. Previously, crypto markets mirrored U.S. equity pullbacks, but this CPI print could serve as a catalyst for Bitcoin's renewed uptrend. The next breakout window for crypto has now opened.

Right now, market sentiment is becoming increasingly tense, with growing investor concerns over a slowing U.S. economy. In an interview with Fox News, President Trump mentioned the term "transition period" for the first time and did not rule out the possibility of a recession. This statement shattered the market's expectation that the government would step in to rescue the economy. Wall Street once believed that if the stock market experienced a sharp correction, the White House would inevitably take action to stabilize it. However, the market is now realizing that the government's true intention is to swiftly restructure the economy rather than provide short-term support.

The market has come to accept a fundamental reality: this is a government-driven economic adjustment, where tariffs and a potential recession are seen as a "remedy" for reducing inflation. In other words, policymakers would rather opt for a swift and decisive "demolition" rather than delaying the resolution of structural issues. This strategy has directly led to a decline in U.S. Treasury yields and triggered significant market volatility. At the same time, the Federal Reserve remains in a wait-and-see mode, refraining from hastily adjusting interest rate policies, making it even harder for investors to pin their hopes on a short-term rebound.

The "buy-the-dip" strategy is no longer working, bears are in control! Citigroup has recently downgraded its U.S. stock market rating from "Overweight" to "Neutral," warning that if the U.S. economy does slide into a recession, the S&P 500 could drop by 20%, with a downside target of 4,600 points. And as we all know, market shifts often happen faster than expected, making risk management the top priority right now.

Fortunately, we had already anticipated this market correction and took decisive action! A few weeks ago, we swiftly shifted 90% of our capital from the stock market to the crypto market, leaving only 10% allocated for portfolio positioning. This strategy not only perfectly avoided the ongoing turbulence in U.S. stocks but also allowed us to seize clear profit opportunities in crypto. Now, while the stock market remains in a consolidation phase, the crypto market continues to attract global capital inflows, emerging as the new safe haven for funds.

A screenshot of a web application interface. At the top, there are two tabs: 'Subscribe' (highlighted in black) and 'Allocation' (white). Below the tabs, there are two buttons: 'Upcoming' (grey) and 'Offering' (blue). The main content area displays a table with the following columns: Name, Start time, Closing time, Schedule, and Action. The table contains one row for 'MDHT / USDT' with a start time of '02/27/2025 12:10:00 PM ET', a closing time of '03/15/2025 11:50:00 AM ET', a progress bar at 77.53%, and a 'Subscribe' button. At the bottom of the table, there are navigation arrows and the number '1'.

Dear IAT Family, we are standing at a historic moment—the final sprint of the large investor allocation is here! Over the past discussions, I've thoroughly explained several key points, and now, it's time to refocus on this life-changing opportunity.

1. Progress of Institutional and Large Investor Allocation

The institutional allocation phase saw 90 million shares snapped up within just 4 hours, fully demonstrating the market's strong confidence in MDHT. While the pace of large investor allocation hasn't matched the institutional frenzy, this is precisely the nature of institutional investment, raising large sums of capital requires time. Currently, the large investor allocation progress has reached nearly 80%, entering the final sprint! Market demand has far exceeded expectations, and investor confidence is stronger than ever!

2. What Does the Progress Bar Mean?

The large investor allocation progress bar does not directly determine MDHT's opening price, but it serves as a crucial indicator, a validation of market confidence. Currently, MDHT's online subscription progress has surpassed 4,500%, signaling that the expected opening price will exceed \$112.5. Meanwhile, the large investor allocation is concentrating market shares, ensuring price stability and effective market capitalization management.

I know that over the past few weeks, everyone has been closely monitoring market trends and doing their best to seize this once-in-a-lifetime opportunity. Now, with only four days left before the large investor allocation phase ends, some members still haven't completed their allocations. This is a wake-up call, you must act immediately! The allocation is limited, and once the progress bar hits 100%, the opportunity will be completely closed!

This time, we must go all in and ensure that we are on the winning side! Just like when I firmly urged everyone to go heavy on AI tech stocks in January 2024, seizing a certainty-driven opportunity and letting time work in our favor, the future rewarded that decision handsomely! The facts speak for themselves: that call was the right one. And now, MDHT's large investor allocation is an even bigger game-changer, a battle that will reshape the wealth landscape!

If you have the financial capability, do not hesitate, go all in on the large investor allocation! Why? Because your funds will only be tied up for 6 days. Once MDHT officially launches on March 17, all profits will be unlocked immediately, this is the ultimate maximization of capital efficiency!

Why is the Large Investor Allocation a "Zero-Risk Certainty"?

- ✓ **Opening price above \$110 is already locked in. Market demand has exceeded expectations, and the 4,500% subscription progress proves it!**
- ✓ **Ordinary allocation success rate is below 2%. Even if returns are 40x, what's the point if you don't get enough allocation?**
- ✓ **Large Investor Allocation guarantees 100% allocation. The more MDHT you secure, the greater your profits!**
- ✓ **Funds are only tied up for 6 days! Once MDHT starts trading on March 17, all profits are fully unlocked and immediately available!**

More importantly, MDHT's issuer has carefully designed a unique allocation mechanism, shifting the large-scale offline allocation model to an online system while setting a maximum cap to ensure that all investors have a fair and equitable opportunity.

 The opportunity is clear, now it's all about securing the largest possible allocation!

MDHT's opening price is already locked above \$110, proving the market's strong confidence in this IEO. At this stage, the question is no longer "Should I participate?" but rather, "How can I maximize my allocation in this risk-free, guaranteed opportunity to achieve the highest possible returns?"

 Why do I keep emphasizing "go all-in on the Large Investor Allocation"?

Because MDHT's Large Investor Allocation not only guarantees you 100% of your allocation, but it also maximizes your 'Green Special Channel' quota to 100%! This means you'll hold significantly more tokens than standard subscribers, and your profits will be exponentially amplified! If you have the capital but hesitate to go all-in, you're missing an opportunity that may never come again! These zero-risk, high-certainty opportunities are rare, and once they're gone, there's no turning back!

The True Value of Large Investor Allocation

💡 **Enhancing market stability and valuation management.** By reducing the proportion of retail investors holding MDHT, we strengthen the influence of core investors, ensuring greater price stability and sustainable growth.

💡 **A dual advantage with Green Special Channel – Participating in Large Investor Allocation boosts your ‘Green Special Channel’ quota to 100%, and Large Investor Allocation itself is also 100%—a double win for your investment!**

💡 **We are not just investors; we are market leaders! – By securing a larger share of MDHT, we gain greater control and influence over the project’s future growth, positioning ourselves at the forefront of its long-term success.**

🚩 **Remember! We are here to make "certain money" and secure "pre-listing profits," not to gamble in the secondary market after MDHT goes live! While MDHT has tremendous potential for growth post-listing, the market is always unpredictable. Smart investors focus on locking in profits rather than taking unnecessary risks. If you hold a Large Investor Allocation, the safest and most strategic move is to sell decisively at the market’s peak sentiment, ensuring you secure the maximum risk-free profit!**

Of course, you can also hold onto some MDHT and wait for a bigger price surge, but at that point, you're stepping into secondary market speculation, which comes with higher risks. If your goal is to keep your profits growing, the best strategy is to use the gains from MDHT to buy the dip on more high-quality assets, further accelerating your wealth accumulation.

Right now, the only thing you need to do is secure your allocation in the large investor offering, ensuring you're on the fast track to maximizing profits! Opportunities belong to those who dare to seize them. This is not just an investment, it's a decision that will shape your future!

As we stand at this critical moment before MDHT goes public, looking back at every step we've taken, we're witnessing a historic investment opportunity. Now, we are in the final sprint before the large investor allocation deadline! This is a moment that demands decisive action, once missed, it may never come again!

Why is this Large Investor Allocation Crucial?

1. MDHT's Allocation Mechanism, Filtering Out the Real Winners

MDHT's issuance team has carefully designed a distribution mechanism that ensures the majority of tokens are allocated to high-quality investors, reducing the short-term impact of retail traders on the market. This strategy guarantees price stability post-listing and lays a solid foundation for long-term growth. Markets dominated by excessive retail participation often face selling pressure right after listing, leading to volatility and price drops. However, MDHT's approach is designed to prevent this risk, ensuring that large investors and institutions become the dominant market force!

2. Market Demand Exceeds Expectations, Supply-Demand Imbalance Drives Prices Higher

During MDHT's IEO process, we have witnessed an unprecedented oversubscription frenzy. With an online subscription progress of 4500%, institutional allocation sold out within 4 hours, and 80% of the large investor allocation already secured, it's clear that demand is far beyond initial projections! This means that a massive number of investors who couldn't secure their desired allocation will rush in after listing, triggering a buying frenzy that will inevitably drive MDHT's price to new heights! 🚀 🔥

3. 'Green Special Channel' + Large Investor Allocation = Absolute Advantage

Many members of the IAT community have secured 15%-45% of the initial allocation through the 'Green Special Channel', but let's be clear, that alone is not enough. The true winners are those who seize the large investor allocation, as their final allocation ratio reaches 100%! In contrast, the final winning rate for ordinary retail investors may drop to as low as 2%, meaning their actual allocation is minimal. However, by going all-in on the large investor allocation, you place yourself in a position of absolute market advantage, ensuring maximum wealth growth!

4. Missing the Large Investor Allocation = Double Loss

Failing to complete the large investor allocation doesn't just mean losing the extra 100% allocation, it also means your 'Green Special Channel' allocation will be further diluted. In other words, instead of being a market leader, you risk becoming a marginal participant. This is not an outcome we can accept!

Now is the Time to Act! We've reached the critical moment, success or failure will be decided right now! We are not just retail investors, we are a powerful team, a strong investment alliance with unwavering conviction. Our goal is not to be bystanders, but to be the biggest beneficiaries when MDHT goes live!

If your funds are not yet in place, contact the assistant immediately to secure your large allocation quota! This is not just an investment, it is a competition for the future, wealth, status, and opportunity.

Friends, each of us has the ability to achieve our dreams, but the real difference lies in whether you're willing to turn dreams into action! Opportunities always favor those who move forward boldly, not those who sit back and wait. On this journey toward financial freedom, we are never alone! We are a closely connected family, sharing the same goals, the same beliefs, supporting each other, and growing together. Now is the time for us to unite as one and march toward an even brighter future!

Let's give it our all, stay firm in our belief, seize this once-in-a-lifetime opportunity, and create our own legend! 🚀 🔥

3:30 PM

Samuel Turner

Closing Commentary (α & β Strategy)

Good afternoon, community members!

I'm Samuel Turner, and this morning, Helmsman once again sounded the alarm, time is running out for MDHT's Large Investor Allocation! His call reminded me of January 2024, when he firmly urged us to go all in on AI tech stocks. Those who listened to his guidance and acted decisively have since reaped massive wealth, while those who hesitated, unsure of making a move, watched opportunities slip through their fingers, only to be left with regret. Now, MDHT's Large Investor Allocation presents yet another historic moment to transform your financial future! Will you seize it this time, or will you let it slip away once again?

This is not just another investment opportunity, it is a high-conviction opportunity in the truest sense. While it may not immediately grant you financial freedom, it has the potential to elevate your capital to an entirely new level. Opportunities of this magnitude are rare in the market, and when one stands right in front of you, the only question that truly matters is: Do you have the courage and decisiveness to seize it?

If your capital allows, I strongly recommend maximizing your MDHT Large Investor Allocation subscription. The ultimate winners in this game will be those who secure the highest allocation in both GSC and the Large Investor Allocation round. Even if you're holding tens of millions or even hundreds of millions of dollars, your subscription will still be capped at the predetermined maximum limit. This is part of the fair, transparent, and structured mechanism set by the project team and the trading center, a system designed to ensure long-term market stability while maintaining token liquidity, preventing a small handful of players from monopolizing the supply.

Yesterday, I spoke about the importance of taking the right action. Today, I want to emphasize this, MDHT's IEO issuance mechanism is a game of survival in the capital markets. It follows the laws of big capital and is the natural selection of the market. If you can align yourself with this trend, you will ride the next great wave of wealth. But if you hesitate, clinging to uncertainty or wishful thinking, the market will show no mercy, it will leave you behind, making you one of those who regret missing this revolution. This is not just another investment decision, it is a launchpad to propel you to an entirely new level of wealth!

The opportunity is right in front of you, the only question now is, do you have the courage and wisdom to seize it? Soon, I'll be sharing exclusive insights on MDHT's IEO, giving you a glimpse into the broader vision behind this interstellar journey. Are you ready for a true wealth breakthrough? Time waits for no one. Opportunities belong only to those who act decisively and fearlessly.

Guys, recognizing market signals is more important than anything! The S&P 500 daily candlestick chart has already formed a clear bearish pattern, leaving no doubt that we are in the midst of a trend correction. When the 5-day moving average (5MA) crosses below the 20-day moving average (20MA), it signals that a bearish trend is quietly taking shape. And let's be clear, this is a warning sign. It suggests that the current short-term volatility is merely a prelude to a deeper pullback, with more downside likely ahead.

More importantly, the 5-week moving average (5MA) has crossed below the 20-week moving average (20MA), forming a death cross, a pattern that typically signals stronger downside pressure on a larger scale.

In the short term, the first downside target is now around 5,300. When we factor in the monthly chart's technical setup, there is no doubt that this is a confirmed correction, the bears are firmly in control. This is not just a brief market fluctuation, but a true structural adjustment. Misjudging the trend could lead to severe consequences.

In a market like this, what's your strategy? Will you cling to high-priced stocks, hoping for a rebound, or will you adjust your positions decisively, seeking a safer haven? Smart investors don't fight the trend, they move with it, identifying high-conviction opportunities. Remember, when the S&P 500 enters a correction, capital doesn't disappear, it flows toward new opportunities. And right now, crypto is emerging as that next major frontier. This market pullback isn't just a warning, it's a strategic signal, giving you a prime opportunity to reposition for the next big wave!

Although this morning's CPI data came in lower than market expectations, the bulls clearly weren't convinced. Despite a strong pre-market gap up, the market failed to sustain momentum, opting instead for a fade-the-rally pattern with choppy price action. This signals that investor sentiment remains cautious, and

in the current environment, selling into strength is proving to be the smartest trading strategy.

Uncertainty surrounding Trump's tariffs is hitting the stock market hard. Investors, economists, and corporate executives are increasingly recognizing that this round of tariff policies could be even more disruptive than during his previous term, further intensifying recession fears. A clear warning sign comes from the Atlanta Fed's GDPNow model, which has been dramatically revised downward. The model now projects that U.S. GDP will contract at an annualized rate of 2.4% in Q1. While GDPNow is not an official forecast, it provides a real-time estimate based on the latest economic data. Following a surge in imports in January, the model turned negative, indicating that businesses are rushing to secure lower-cost goods before the new tariffs take effect.

While some economists still expect the U.S. economy to grow in Q1, it's clear that the pace of expansion is slowing significantly. JPMorgan now forecasts that Q1 GDP growth will drop to just 1%, a sharp decline from 2.3% in Q4 2024. What's even more concerning is that Trump himself refused to rule out the possibility of a recession during an interview with Fox Business, which triggered a major sell-off in Monday's market. When asked whether he expects

a recession this year, his response was cryptic: "I hate making predictions about things like this... but what we're doing is very big, and it will take some time."

But the market isn't willing to wait. Investors are increasingly worried that Trump's tariff policies could be even more damaging than those in 2018-2019. Back then, the U.S. imposed tariffs primarily on Chinese goods, along with higher duties on steel, aluminum, and specific products like washing machines. This time, however, Trump is planning a 20% tariff on all Chinese imports, while also threatening a 25% tariff on goods from Canada and Mexico, America's largest trading partners. Even more aggressively, he has vowed to impose "reciprocal tariffs" on all countries that levy tariffs on U.S. goods, including Europe, India, and Japan.

In other words, this isn't just about China, it's a full-scale global tariff escalation. According to Goldman Sachs Chief Economist Jan Hatzius, the average U.S. tariff on imported goods could rise by 10 percentage points, making it five times higher than during Trump's first term. This shock will directly impact corporate profits, the job market, and ultimately consumer spending. And history has already shown us, tariff costs are inevitably passed on to businesses and consumers, further dampening economic growth.

The market is already feeling the pressure of this impending shock. One of the clearest warning signals is the steady rise in unemployment. When businesses sense weakening demand, their first reaction is often to freeze hiring and in many cases, initiate layoffs. In this economic climate, market turbulence may just be getting started. As for where the bottom of this correction lies? No one has a definitive answer yet.

In this market environment, where should your capital be positioned? Will you hold onto overvalued stocks, hoping for a turnaround? Or will you adjust your strategy decisively and seek higher-conviction investment opportunities? This time, the right choice matters more than effort!

Looking at Bitcoin's daily candlestick chart, the 5-day moving average (5MA) has clearly crossed below the 20-day moving average (20MA), confirming a bearish correction trend. Reflecting on last week's White House Crypto Summit, I had already emphasized that unless a major bullish catalyst emerged, Bitcoin would struggle to rally significantly. As it turns out, the bulls failed to capitalize on the summit, and instead, Bitcoin has reverted to technical patterns, undergoing a period of choppy consolidation and correction.

The key takeaway is this, Bitcoin's bullish structure remains intact, and its uptrend line is still holding. This correction is not a breakdown, but rather a prime buying opportunity for the bulls! You only need to understand one core principle: the U.S. Bitcoin strategic reserve is now in motion, and buying the dip is the only rational choice! Do you really think strategic funds are buying Bitcoin at high prices? Think again. They are accumulating at lower levels, securing a long-term advantage, not becoming exit liquidity for the market.

Global capital is shifting toward digital assets at an unprecedented pace, and Bitcoin has cemented itself as a core unit in the future economic system. Adopting Bitcoin not only reinforces the U.S. dollar's global dominance but also prevents other nations from gaining a first-mover advantage, ensuring that

America stays ahead in this digital revolution rather than falling behind. Roughly \$400 trillion in global capital is now in motion, transitioning from 20th-century physical assets and traditional financial markets to the 21st-century digital economy. And at the center of this transformation is the Bitcoin network.

In this new digital world, Satoshi (SATS) has become the standard unit of measurement for the digital economy, while hash power now defines the strength of the global financial system. In the future, wealth will no longer be dictated by central bank monetary policies. Instead, it will be controlled by the nations and institutions that dominate the Bitcoin network. The U.S. must act now to ensure that Bitcoin becomes the cornerstone of the financial system. Otherwise, other nations will seize the lead, dictate global capital flows, and establish dominance over the future of wealth.

Today, Bitcoin holds 99% of the power in the entire crypto market, and the U.S. government has recognized it as a legitimate form of digital capital. For the United States, Bitcoin is not just another investment asset, it is a strategic asset tied to national financial security, economic stability, and global dominance. This is not just a choice, it is a battle for the future. Prosperity or decline? Bitcoin has become the ultimate bargaining chip in America's ability to maintain its

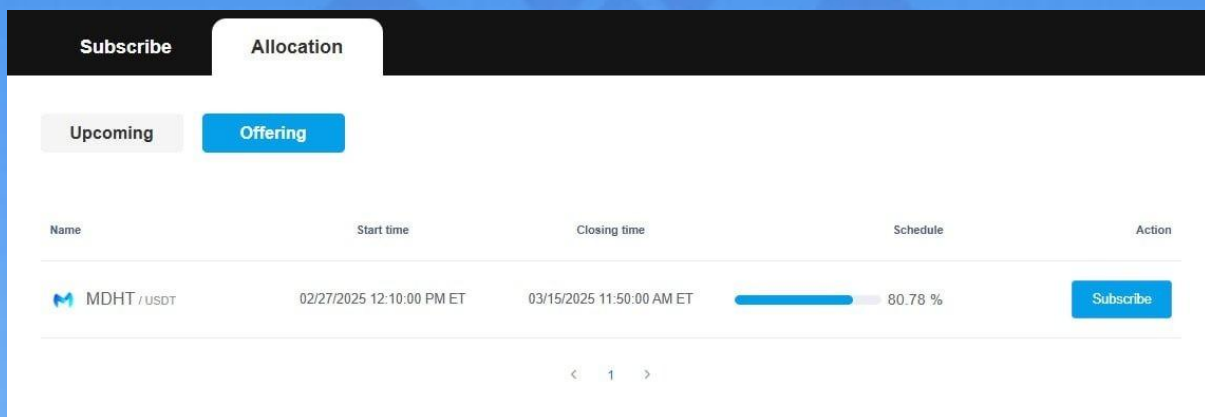

dominance over global finance and with it comes unprecedented opportunities in the crypto market!

Guys, we're like world-class surfing champions, riding the massive wave of MDHT's IEO! Are you ready? Next week, when MDHT officially hits the market, our goal isn't just to reach Mars, we're turning it into our playground! And this? This is just the beginning. We're about to cross the cosmos and chart our own path to wealth. The next crypto super bull market? This is our gateway to an uncharted galaxy. The only question is, are you ready to take control?

Let's take a look at the reality, MDHT's online subscription progress bar skyrocketed, ultimately locking in at 4,503%! What does this mean? It means the opening price will far exceed the current allocation price, and those still sitting on the sidelines will be left watching profits soar while they get left behind. Can you feel the market's explosive momentum? Do you realize this is a game that can truly redefine wealth and opportunity?

Look at this ace card—our GSC allocation surged from 15-45% all the way to 100%! This is the power of the IAT community! From standard subscriptions to GSC, and finally to the Large Investor Allocation, we have walked a straight path to victory. Let's be real, guys, without the Helmsman's precise strategy and the team's expert resource coordination, do you really think you could have seized this kind of opportunity on your own?

And now, the Large Investor Allocation progress bar has surged past 80%! This means the remaining allocation is shrinking fast, and the window of opportunity is closing. How much time do you really have left to hesitate? Are you willing to stand by and watch others feast, while you don't even get a sip of the broth?

The market has never been merciful, it only rewards those who are prepared and seize opportunities. This isn't just about MDHT's IEO, it's about a strategic positioning for the future of the crypto market. The Trump administration has already launched its Crypto Capital initiative, and Bitcoin's national strategic reserve is just the first step. The second step? Reshaping the ICO market, bringing it into a more regulated, yet even more explosive era. By 2025, IEOs will surpass the 2017 ICO boom, with the market expected to break the trillion-dollar mark!

Look at the reality, TRUMP Coin skyrocketed 450x in just two days, igniting a global investor frenzy! So, the real question is what's the next explosive project? The answer is right here, MDHT!

- ◆ Institutions snapped up \$90 million in allocation within just 4 hours, a clear signal that capital is flooding in at full speed!**
- ◆ 4,503% subscription progress, demand for MDHT is beyond imagination, and a price surge past \$100 is virtually inevitable!**
- ◆ The maximum cap for the Large Investor Allocation is set, even if you have tens or hundreds of millions, want to buy more? Too bad, there's no way in!**

In the face of this opportunity, there's only one move, ALL IN! Remember the ICO boom of 2017? Maybe you hesitated back then and watched as others rode the wealth-creation wave while you missed out. Now, in 2025, the golden era of regulated IEOs has begun. Will you let history repeat itself, or will you seize this moment?

When MDHT goes live, those who secured allocations in the Large Investor round won't just see massive financial gains, they'll gain a VIP seat in the AlphaStream 5.0 core trading circle, joining the elite ranks of the market's top players. This isn't just an opportunity for wealth acceleration, it's your ticket into the true elite club of high-level investors!

Guys, the more you put in, the more you get out! This isn't just another IEO, it's a capital war, a reshuffling of wealth and power. Are you going to be a winner or just a spectator?

Time waits for no one, and the opportunity is right in front of you. The Large Investor Allocation is disappearing fast, and the final window to buy in is closing. If you still have a chance to participate, don't hesitate. Taking action is the only right choice! Now is the time to make your mark on history. Let's dominate the market together and create our own legendary success!

A large, faded version of the IAT logo and the text 'AI 5.0' is centered in the middle of the page. The logo is a dark blue 'X' shape, and the text 'AI 5.0' is in a bold, sans-serif font, both rendered in a lighter blue color that blends with the background.

AI 5.0
